EXECUTIVE SUMMARY

Ambulance Response Programme – Definition & Overview

These are the National Standards issued to all Ambulance Trusts by NHS England

Category 3	34%	<ul style="list-style-type: none"> 60 minutes mean response time 120 minutes 90th centile response time 	The earliest of: <ul style="list-style-type: none"> The problem being identified An ambulance response being dispatched 240 seconds from the call being connected 	If a patient is transported by an emergency vehicle, only the arrival of the transporting vehicle stops the clock. If the patient does not need transport, the first emergency vehicle arriving at the scene of the incident stops the clock.
Category 4	10%	<ul style="list-style-type: none"> 180 minutes 90th centile response time 	The earliest of: <ul style="list-style-type: none"> The problem being identified An ambulance response being dispatched 240 seconds from the call being connected 	Category 4T: If a patient is transported by an emergency vehicle, only the arrival of the transporting vehicle stops the clock.

The new standards are intended to:

- Prioritise the sickest patients quickly to ensure they receive the fastest response.
- Ensure national response targets to apply to every patient for the first time – so ending ‘hidden waits’ for patients in lower categories.
- Ensure more equitable response for patients across the call categories.
- Improve care for stroke and heart attack patients through sending the right resource first time.

EXECUTIVE SUMMARY

Performance Summary

Demand

- 101,858 incidents were provided with a face to face response in M10.
- M10 saw the highest number of face to face incidents, since the introduction of the ARP.
- C2 incidents increased by 4.2% when compared to the previous month.

Outliers

- The table opposite shows the outlier CCGs with long responses for the C4 90th centile measure. The table shows the top chief complaints and the number of incidents per CCG.
- This month all of these long responses were categorised as 111 Transfers.

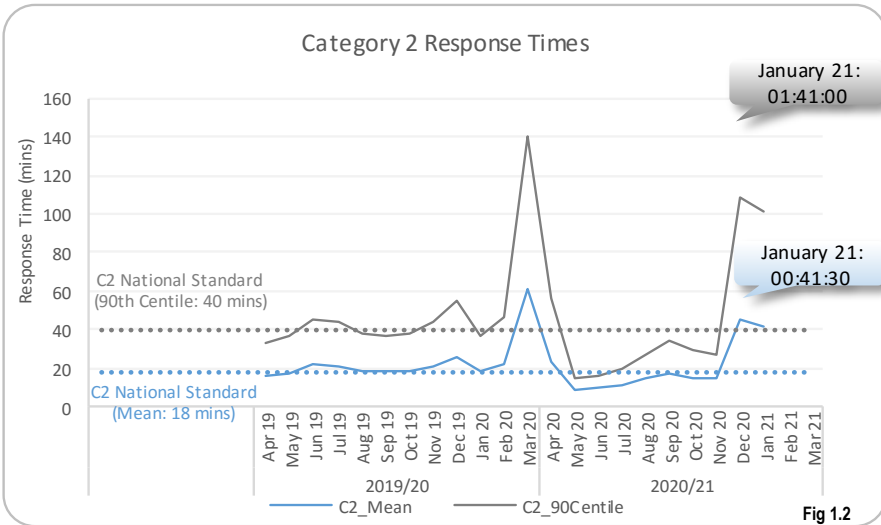

Performance

- M10 saw the C1 performance over the 7 minute target for the second consecutive month, since the beginning of the pandemic.
- Although M10 shows some of the key indicators as performing above the targets, there has been and improvement across all indicators.

Performance Overview

Call Answering Performance

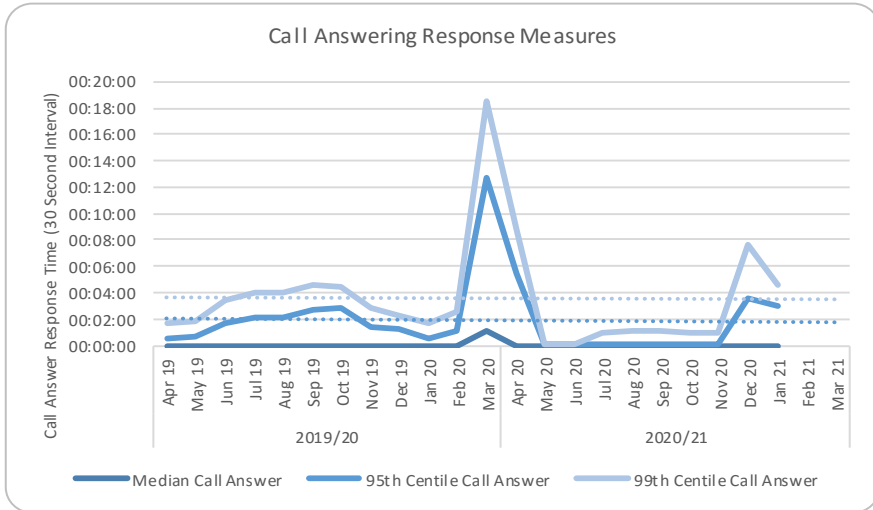

Fig 5.1

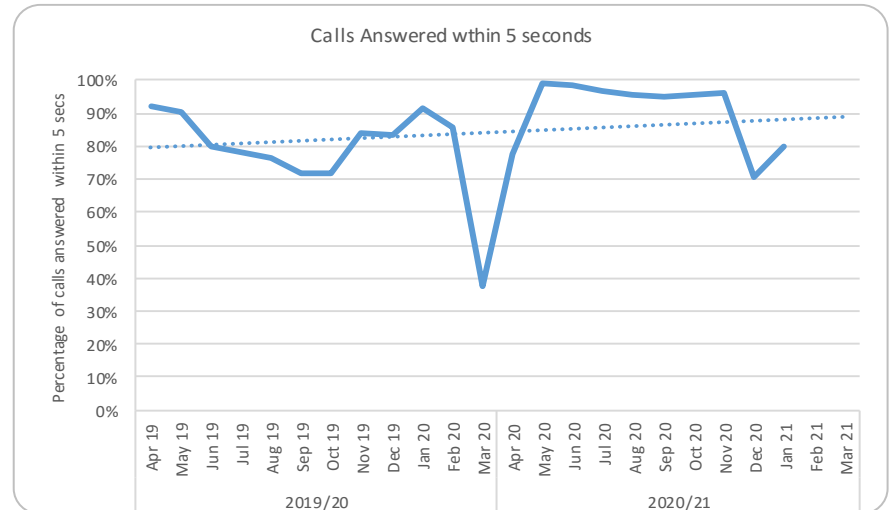

Fig 5.2

■ Figure 5.1 demonstrates three key measures for call answering under the Ambulance Response Programme (ARP).

- 144,417 calls were received into the EOC in January 2021 (M10).
 - 1,672,770 calls have been received into the EOC for the YTD.
- During January the median call answering was zero seconds.
 - This means 50% or half of all calls received into the Emergency Operations Centre (EOC) were answered immediately.
- The 95th centile was 180 seconds. (approx. 3 minutes)
 - In other words 95 out of every 100 calls were answered in less than 180 seconds.

■ Figure 5.2 shows the percentage of calls answered within five seconds.

- 101,858 incidents received a face-to-face response in January 2021 (M10).
 - 1,179,576 incidents received a face-to-face response for the YTD.

The new ARP standards no longer use this performance measure and for that reason there is longer a requirement to report it.

However, to illustrate the graph shows the daily call taking performance in the month.

- In January 80% of all calls received into the EOC were answered within five seconds.

■ Figure 6.1 shows a breakdown of resource levels, in patient facing vehicle hours.

- The **Planned Resource Level** is the ORH plan for patient facing vehicle hours. This is profiled by responder type.
- The **Current Resource Level (GRS)** are the actual patient facing hours produced profiled by responder type.
- The **Current Resource Gap** is shown to demonstrate the gap in resourcing for these responder types each month.

GRS data shows scheduled hours and as such it does not include pre or post shift overtime hours.
